

NexStock GitHub Cleanup Checklist

Objective

Prepare the NexStock repository for public GitHub release by removing unnecessary, generated, sensitive, and environment-specific files while preserving all source code required to build and run the application.

Remove Sensitive Files

Delete all environment files from version control.

Files to remove:

```
.env  
backend/.env  
frontend/.env
```

Reason:

- May contain database credentials
- May contain JWT secrets
- May contain API keys
- Security risk if exposed publicly

Create a template file instead:

```
backend/.env.example
```

Example:

```
DATABASE_URL=  
JWT_SECRET=  
JWT_ALGORITHM=  
ACCESS_TOKEN_EXPIRE_MINUTES=
```

Remove Python Virtual Environment

Delete:

```
backend/.venv/
```

or any equivalent:

```
venv/  
env/
```

Reason:

- Generated automatically
 - Platform dependent
 - Very large
 - Can be recreated from requirements.txt
-

Remove Frontend Dependencies

Delete:

```
frontend/node_modules/
```

Reason:

- Generated automatically
- Extremely large
- Can be recreated using:

npm install

Review Standalone Scripts

Check whether the following file is actually used by the application:

```
extract_pdf.py
```

If it is not imported or used anywhere in the production application:

- Remove it from the repository

If it is required:

- Move it into the appropriate module folder
-

Review Personal Development Documents

Check the following files:

```
NexStock V1 Completion Checklist.pdf
NexStock_V1_Module_Prompts.md
```

Options:

Keep

If using repository as a portfolio showcase and want to demonstrate planning and documentation.

Remove

If repository should contain only production source code.

Add Root .gitignore

Create:

```
.gitignore
```

Contents:

```
# Environment
.env
.env.*

# Python
__pycache__/
*.pyc
```

```
*.pyo
*.pyd

# Virtual Environments
.venv/
venv/
env/

# Database
*.db
*.sqlite3

# Logs
*.log

# Node
node_modules/

# Build
dist/
build/

# IDE
.vscode/
.idea/

# OS
.DS_Store
Thumbs.db
```

Add README.md

Create a professional README containing:

Project Name

NexStock – Warehouse Intelligence & Inventory Management Platform

Overview

Brief explanation of the project.

Features

- Authentication
- Role-Based Access Control
- Product Management
- Category Management
- Inventory Tracking
- Stock Movement Monitoring
- Analytics Dashboard
- Reporting System

Tech Stack

Backend

- Python
- FastAPI
- SQLAlchemy
- Alembic
- PostgreSQL

Frontend

- React
- TypeScript
- Tailwind CSS
- Vite
- Recharts

Installation

Backend setup instructions.

Frontend setup instructions.

Screenshots

Dashboard screenshots.

Future Roadmap

Planned features for future versions.

Add License

Create:

LICENSE

Use:

MIT License

Add Architecture Documentation

Create:

docs/architecture.md

Architecture:

```
graph TD
    A[React Frontend] --> B[FastAPI REST APIs]
    B --> C[Service Layer]
    C --> D[Repository Layer]
    D --> E[PostgreSQL Database]
```

Final Repository Structure

```
NexStock/
|
├── backend/
```

```
|   |─ app/
|   |─ alembic/
|   |─ requirements.txt
|   └─ .env.example
|
|─ frontend/
|   |─ src/
|   |─ public/
|   |─ package.json
|   └─ vite.config.ts
|
|─ docs/
|   └─ architecture.md
|
|─ README.md
|─ LICENSE
|─ .gitignore
└─ requirements.txt
```

Validation Checklist

Before pushing to GitHub verify:

- No .env files exist
- No secrets exist in source code
- No .venv folder exists
- No node_modules folder exists
- README.md exists
- LICENSE exists
- .gitignore exists
- Project builds successfully after fresh install
- Repository size remains minimal
- All source code and functionality remain intact
